

TANYA CHISEPO

Daytona Beach, FL | (386) 383-1436 | tanyachisepo04@gmail.com | LinkedIn | tanyachisepo.dev

SUMMARY

Motivated and enthusiastic Software Engineer (New Grad) with 3 internships at Meta, delivering production-level mobile and full-stack features across iOS, Android, and web platforms. Experienced in React Native, React.js, Node.js, Python, JavaScript, GraphQL, REST APIs, AWS, and Docker. Passionate about product development, software architecture, and building user-focused applications. STEM OPT eligible — no sponsorship required.

SKILLS

Languages: Python, Java, JavaScript, TypeScript, PHP, SQL, GraphQL, HTML/CSS

Frameworks & Platforms: React.js, React Native, Node.js, PostgreSQL, MongoDB, Android, Redux, .NET

Cloud & DevOps: AWS, Docker, Git, REST APIs, Supabase, Firebase

AI/ML: TensorFlow, OpenCV, Mediapipe, CycleGAN, GANs, Computer Vision, Deep Learning, OpenAI APIs

Concepts: Software Engineering, Software Architecture, Full-Stack Web Development, Cross-Platform Mobile Development, Product Development, UI/UX Design, Analytics, E-Commerce, UiPath RPA Development

EDUCATION

Bethune-Cookman University | B.S., Computer Science | GPA: 4.0 | May 2026 | Daytona Beach, FL

EXPERIENCE

Meta | Software Engineering Intern – Mobile, Cross-Platform (iOS/Android) | May–Aug 2025 | Remote

- Engineered end-to-end a Facebook mobile app feature enabling users to search and bulk-add saved content to collections, incorporating global search functionality and resulting in a 40% increase in content saves.
- Designed and deployed 15+ reusable UI components in React Native on a cross-platform framework, accelerating development and ensuring consistent UI/UX across iOS and Android, saving 300+ engineering hours.
- Increased test coverage by 15% through unit and end-to-end testing, supporting faster product iteration.
- Implemented a streamlined feature QA testing process running in parallel with development, decreasing the feature development-to-launch timeline by 30%, resulting in two-week faster releases.

Meta | Software Engineering Intern – Backend Infrastructure | May–Aug 2024 | Remote

- Led migration of an automation feature to a new infrastructure platform within 3 weeks, ensuring seamless functionality while maintaining all key product metrics.
- Designed and built a novel multi-tier FAQ infrastructure system, streamlining chatbot interactions and increasing leads retention by 10%.
- Engineered a tree-based graph schema using GraphQL endpoints to streamline FAQ creation and retrieval, estimating a 40% improvement in business page message response time.
- Delivered 30% boost in test coverage through comprehensive unit testing and code refactoring.

Meta | Meta University Engineering Intern – Full-Stack Web | Jun–Aug 2023 | Remote

- Delivered a fully functional full-stack web app prototype within 5 weeks despite no prior JavaScript experience, implementing advanced search features, responsive design, and REST API integrations to exceed project goals.

Bethune-Cookman University | Computer Science Teaching Assistant | Feb 2024–Present | Daytona Beach, FL

- Provided personalized coding guidance to students struggling with programming assignments, resulting in 15+ students completing 5+ practice coding challenges weekly.

PROJECTS

Basafy | AI Job Search and Interview Tracking Tool | Oct 2025–Present

- Building a React Native mobile app that scrapes Gmail and parses interview emails using Python and Google APIs to auto-update a dashboard of job applications and interview stages.
- Integrated calendar APIs and custom logic to set reminders, track deadlines, and surface AI-driven insights from new emails.
- Designed a clean full-stack workflow using React Native, Node.js, and Supabase to centralize all job search data and eliminate manual tracking.

InterPace | Technical and Behavioral Interview Prep Platform | Nov 2025–Present

- Built a full-stack web app using OpenAI Whisper, speech analysis, and custom scoring to give feedback on pacing, filler words, tone, and clarity.
- Added gamified DSA and pattern practice with timed rounds, streaks, and progress tracking using React, Node.js, and Python.
- Expanding into a React Native mobile app with the same coaching tools for practice anywhere.

Virtual Makeup Application | Feb 2025–Present

- Designed an AI-driven virtual makeup application using Mediapipe facial landmarking and CycleGAN image style transfer, enabling users to experiment with 20+ makeup styles.
- Curated a 1,000+ image dataset of diverse skin tones with professional makeup, improving application accuracy by 30% and addressing a gap in existing computer vision datasets.

ADDITIONAL

- IEEE SoutheastCon Hardware Competition** (Apr 2025) — Developed autonomous movement logic for a robotics challenge and assembled robot chassis from scratch; placed 3rd out of 60 schools.
- Black Excellence SMART Hackathon (American Airlines)** (Nov 2024) — Built a digital assistant web prototype in under 24 hours; contributed to user flow design and frontend development in a team of 4; placed 4th out of 47 schools.
- Jane Street INSIGHT Program** (Jan 2024) — Built a Python trading bot as part of a simulated trading competition; placed 3rd overall.
- Generation Google Scholarship Winner (North America)** (Jun 2024) — Selected as 1 of 56 recipients out of thousands of applicants for leadership potential and commitment to diversity and inclusion in tech.
