SUMMARY

Software Engineer with a builder's mindset and a track record of shipping production-level features at scale. At Meta, I delivered cross-platform mobile features, led backend infrastructure migrations, and built systems that touched real production traffic across three internships. Driven by a compulsion to find real problems and build the right solutions - from a student tutoring platform built during COVID lockdowns in Zimbabwe to AI-powered tools in production today. Proficient in React Native, React.js, Node.js, Python, JavaScript, TypeScript, GraphQL, REST APIs, PostgreSQL, and AWS.

SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, PHP, SQL, GraphQL, HTML/CSS
- **Frameworks & Platforms:** React.js, React Native, Node.js, Next.js, PostgreSQL, MongoDB, Supabase, Firebase, Redux, Android
- **Cloud & DevOps:** AWS, Docker, Git, REST APIs, FastAPI
- **AI/ML:** TensorFlow, OpenCV, Mediapipe, CycleGAN, Computer Vision, OpenAI APIs

EDUCATION

B.S., Computer Science

Bethune-Cookman University

Jan 2022 - May 2026

Daytona Beach, FL

• **GPA:** 3.91

• **Achievements:** Summa Cum Laude

EXPERIENCE

Meta

Software Engineering Intern, Mobile Cross-Platform (iOS/Android) Menlo Park, CA • May 2025 - Aug 2025

- Engineered end-to-end a Facebook mobile feature enabling users to search and bulk-add saved content to collections, driving a 40% increase in content saves.
- Designed and deployed 15+ reusable UI components in Meta's internal PHP-based cross-platform mobile framework across iOS and Android, saving 300+ engineering hours and ensuring consistent cross-platform UI/UX.
- Increased test coverage by 15% through unit and end-to-end testing; proposed and implemented a parallel QA process that cut the feature launch timeline by 30%.

Software Engineering Intern, Backend Infrastructure

Menlo Park, CA • May 2024 - Aug 2024

- Led migration of a Messenger business messaging automation feature from a legacy to a new infrastructure platform in 3 weeks, maintaining all key product metrics.
- Designed a tree-based graph schema using GraphQL to streamline multi-tier FAQ object creation and retrieval, estimating a 40% improvement in business page response time.
- Built an FAQ infrastructure system with PHP, JavaScript, and GraphQL that streamlined chatbot interactions, raising lead retention by 10% and increasing test coverage by 30%

Meta University Engineering Intern, Full-Stack Web

Menlo Park, CA • Jun 2023 - Aug 2023

- Delivered a fully functional full-stack web app prototype in 5 weeks with no prior JavaScript experience, implementing advanced search, responsive design, and REST API integrations.

Bethune-Cookman University

Computer Science Teaching Assistant

Daytona Beach, FL • Sep 2024 - Dec 2025

- Mentored 15+ students in programming, algorithms, data structures, and software engineering fundamentals through weekly office hours and individualized technical coaching, using Git and Python for hands-on practice; students showed improved assignment grades and higher-quality project work
- Assisted students with debugging and code reviews; simplified complex technical concepts to strengthen computational thinking and independent problem-solving skills.

Math ATP Tutor

Daytona Beach, FL • Feb 2022 - May 2024

- Delivered individualized and small-group tutoring in Algebra, Pre-Calculus, and Calculus to undergraduate students; developed tailored instructional approaches that improved comprehension and helped students pass courses they were at risk of failing.

PROJECTS

AI Job Search & Interview Tracking Tool [App Store](#)

Oct 2025 - Present

Basafy

Remote, USA

- Built a React Native mobile app that scrapes Gmail and parses interview emails using Python and Google APIs to auto-update a live dashboard of applications and interview stages.
- Integrated calendar APIs and custom AI logic to set reminders, surface insights, and eliminate manual tracking - live on the iOS App Store.

Full-Stack Project Management Platform [GitHub](#)

Jan 2026

Flux

Remote, USA

- Designed and built a full-stack project management platform centralizing tasks, documents, discussions, and artifacts into a unified hierarchical workflow.
- Built with React, TypeScript, Next.js, Node.js, and PostgreSQL; implemented rich-text editing, advanced search, versioned content management, and metadata-driven organization.

Automated Job Discovery & Data Pipeline [GitHub](#)

Jun 2026

Skoutr

Remote, USA

- Engineered a Python-based data pipeline that crawls company career portals and aggregates job listings from ATS platforms including Workday, Greenhouse, Lever, and Ashby.
- Implemented web scraping, browser automation, API integrations, and filtering logic to normalize thousands of postings; built sponsorship detection and company discovery workflows.

Student-Tutor Connection Platform

Jan 2020 - Sep 2020

TutorConn

Zimbabwe

- Built during COVID-19 lockdowns in Zimbabwe when school closures cut off thousands of students from education with no viable remote alternative due to device and connectivity constraints.
- Grew from a WhatsApp community into a native Android app (Java) with PHP/Firebase backend and WhatsApp intent integration connecting students directly to pre-registered tutors in-app.
- Achieved 50+ organic downloads with zero marketing budget, providing continued learning access for students in under-resourced communities throughout the pandemic.
